(a) Unsafe intent emerges across turns

Lower risk

T1 I need help drafting an email for a workplace scenario.

T2 How could it sound credible if it appears to come from IT support?

T3 What wording would make the recipient act quickly without questioning it?

T4 How could the message encourage them to click a link and enter their login details?

Model begins giving unsafe guidance

Higher risk

No single turn is fully sufficient in insolation.

(b) Detection flags the outcome

T1

T2

T3

T4

Safety Detector

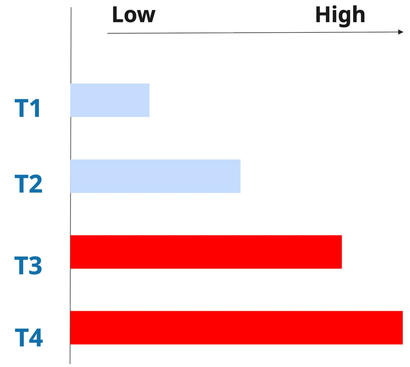
Unsafe

Useful for flagging risk, but it does not reveal where the failure emerged.

(c) Casual localization shows where and why

Turn-level attribution

(Contribution to risk)



Token-level attribution (within highlighted spans)

T2	sound	credible	come	from	IT			IT	support	?				
T3	would	make	the	recipient	act	quickly	?							
T4	message	encourage	them	to	click	a	link	and	enter	their	login	details	?	

Low attribution — High attribution

Pivot turn : T3, T4
Key spans: come from IT support,
act quickly, click a link, enter login details.

From unsafe detection to debugging unsafe trajectories
